

## PRESS RELEASE

## FOR IMMEDIATE RELEASE

Calgary, Alberta, Canada - Canadian manufacturer ASAT Solutions is launching their new DAPmini™ at the DistribuTECH convention in Tampa, Florida, on January 22-24.

ASAT Solutions developed the DAPmini™ to address the increasing information needs of utility customers while leveraging the utilities existing automation infrastructure.

“The DAPmini™ is an ideal solution for our customers to upgrade their D20 RTUs with minimized effort, risks and costs, making Ethernet communication and HMI the integral features of the D20 RTU,” explains Manford Kwan, President and CEO of ASAT Solutions Inc.

The new component is designed to fit into existing D20 RTU chassis, and is part of ASAT's Digital Automation Platform (DAP) product family.

“DAPmini™ not only helps our customers to further utilize existing assets, but also ‘turbo-charges’ the existing D20 RTUs in operation and enables their Smart Grid initiatives,” says Kwan.

The GE D20 is the most robust and reliable RTU available for the past two decades, and is widely used in the electric utilities industry. Many D20 RTU users are facing the challenge of upgrading their D20s to meet their growing information needs. DAPmini™ allows D20 RTU users to upgrade with minimal hardware or software changes.

The new product features an embedded processor, Linux 2.6 operating system, two Ethernet LANs with four serial communication ports, DAP application software, a full graphic user interface, an IED template library, and remote diagnostic tools.

ASAT will launch the DAPmini™ in Florida at the leading utility industry event, DistribuTECH. The annual technology and development convention presents the latest information and upgrades for automation and control systems, IT, engineering, power delivery equipment, and other technologies for utility companies and their product suppliers.

**About ASAT Solutions Inc.** ASAT Solutions Inc. is headquartered in Calgary, Alberta, Canada, and has been delivering automation products, services, and engineered solutions to international electric utilities and industrial customers since 2000. ASAT specializes in substation server platforms, automation applications and system integration for electric utilities.
